

MOTADATA-8898 — Metric Description in Widget Creation (APM/RUM/Log/NetRoute/Flow)

Manual Test Suite | <http://172.16.10.6:8080/browse/MOTADATA-8898> | 10 cases

TC-DESC-APM — APM metric shows a description on the widget-creation Metric dropdown

Category: APM **Risk:** smoke **Priority:** P1 **Traces to:** A1, A3, A4 **Automation:** Yes (after live locator + content harvest)

Preconditions: logged in; APM data source exists so the APM category lists at least one metric; metric-description data seeded for APM

#	Step	Expected
1	Navigate to Dashboard and start Add/Create Widget	Widget creation screen opens
2	Set the data category / source type to 'APM'	Metric dropdown repopulates with APM metrics
3	Open the Metric dropdown and select the first APM metric	Metric is selected
4	Observe the description affordance (pop-up/tooltip/info panel) for the selected metric	A non-empty description is shown for the APM metric

Final expected: description_visible: true; description_text: non-empty; category: APM

Impact / Affected: Descriptions newly extended to APM/RUM/Log/NetRoute/Flow — previously Metric-only; risk if any category renders blank.

TC-DESC-RUM — RUM metric shows a description on the widget-creation Metric dropdown

Category: RUM **Risk:** smoke **Priority:** P1 **Traces to:** A1, A3, A4 **Automation:** Yes (after live locator + content harvest)

Preconditions: logged in; RUM data source exists; metric-description data seeded for RUM

#	Step	Expected
1	Navigate to Dashboard and start Add/Create Widget	Widget creation screen opens
2	Set the data category / source type to 'RUM'	Metric dropdown repopulates with RUM metrics
3	Open the Metric dropdown and select the first RUM metric	Metric is selected
4	Observe the description affordance for the selected metric	A non-empty description is shown for the RUM metric

Final expected: description_visible: true; description_text: non-empty; category: RUM

Impact / Affected: Descriptions newly extended to APM/RUM/Log/NetRoute/Flow — previously Metric-only; risk if any category renders blank.

TC-DESC-LOG — Log metric shows a description on the widget-creation Metric dropdown

Category: Log **Risk:** smoke **Priority:** P1 **Traces to:** A1, A3, A4 **Automation:** Yes (after live locator + content harvest)

Preconditions: logged in; Log data source exists; metric/event-description data seeded for Log

#	Step	Expected
1	Navigate to Dashboard and start Add/Create Widget	Widget creation screen opens
2	Set the data category / source type to 'Log'	Metric dropdown repopulates with Log metrics
3	Open the Metric dropdown and select the first Log metric	Metric is selected
4	Observe the description affordance for the selected metric	A non-empty description is shown for the Log metric

Final expected: description_visible: true; description_text: non-empty; category: Log

Impact / Affected: Descriptions newly extended to APM/RUM/Log/NetRoute/Flow — previously Metric-only; risk if any category renders blank.

TC-DESC-NETROUTE — NetRoute metric shows a description on the widget-creation Metric dropdown

Category: NetRoute **Risk:** high-traffic **Priority:** P2 **Traces to:** A1, A3, A4 **Automation:** Yes (after live locator + content harvest)

Preconditions: logged in; NetRoute data source exists; metric-description data seeded for NetRoute

#	Step	Expected
1	Navigate to Dashboard and start Add/Create Widget	Widget creation screen opens
2	Set the data category / source type to 'NetRoute'	Metric dropdown repopulates with NetRoute metrics
3	Open the Metric dropdown and select the first NetRoute metric	Metric is selected
4	Observe the description affordance for the selected metric	A non-empty description is shown for the NetRoute metric

Final expected: description_visible: true; description_text: non-empty; category: NetRoute
Impact / Affected: Descriptions newly extended to APM/RUM/Log/NetRoute/Flow — previously Metric-only; risk if any category renders blank.

TC-DESC-FLOW — Flow metric shows a description on the widget-creation Metric dropdown

Category: Flow **Risk:** high-traffic **Priority:** P2 **Traces to:** A1, A3, A4 **Automation:** Yes (after live locator + content harvest)
Preconditions: logged in; Flow data source exists; metric/event-description data seeded for Flow

#	Step	Expected
1	Navigate to Dashboard and start Add/Create Widget	Widget creation screen opens
2	Set the data category / source type to 'Flow'	Metric dropdown repopulates with Flow metrics
3	Open the Metric dropdown and select the first Flow metric	Metric is selected
4	Observe the description affordance for the selected metric	A non-empty description is shown for the Flow metric

Final expected: description_visible: true; description_text: non-empty; category: Flow
Impact / Affected: Descriptions newly extended to APM/RUM/Log/NetRoute/Flow — previously Metric-only; risk if any category renders blank.

TC-DESC-METRIC-REGRESSION — Metric category still shows descriptions (pre-existing behavior, no regression)

Category: Metric **Risk:** smoke **Priority:** P1 **Traces to:** A1 **Automation:** Yes
Preconditions: logged in; a monitored metric source exists

#	Step	Expected
1	Navigate to Dashboard and start Add/Create Widget	Widget creation screen opens
2	Keep category 'Metric'	Metric dropdown lists Metric counters
3	Select the first Metric metric and observe the description	Description shown — unchanged from before this feature

Final expected: description_visible: true; description_text: non-empty; category: Metric
Impact / Affected: Descriptions newly extended to APM/RUM/Log/NetRoute/Flow — previously Metric-only; risk if any category renders blank.

TC-DESC-CONTENT — Description content conveys meaning (what it measures / how to read / root-cause hint)

Category: (all new) **Risk:** high-traffic **Priority:** P2 **Traces to:** A2, A5 **Automation:** Partial (assert non-empty + not-equal-to-key; verbatim copy is manual)
Preconditions: logged in; description data seeded

#	Step	Expected
1	For one metric per category (APM/RUM/Log/NetRoute/Flow), open its description	Description present
2	Read the description text	Text is meaningful (not a placeholder/key), describes what the metric measures and/or how values are interpreted

Final expected: description_text: meaningful (length > N, not equal to the metric key/id)
Impact / Affected: Description must convey what the metric measures / how to read values / root-cause hint. Description text is mapped from each category's data source — wrong/empty mapping is a data defect.

TC-DESC-CONSISTENCY — Description format/structure is consistent across all categories

Category: (all) **Risk:** high-traffic **Priority:** P2 **Traces to:** A6 **Automation:** Yes (structural — same locator pattern resolves in every category)
Preconditions: logged in; description data seeded for every category

#	Step	Expected
1	Trigger the description affordance for one metric in each of Metric/APM/RUM/Log/NetRoute/Flow	Same control/role/container surfaces the description in every category
2	Compare the rendered structure	Consistent format (same component, same placement, same trigger gesture)

Final expected: same_description_container_role_across_categories: true
Impact / Affected: Format/structure must stay consistent across categories.

TC-DESC-MISSING — Metric with no description data shows an 'unavailable' message, not a blank

Category: (any) **Risk:** edge **Priority:** P2 **Traces to:** A7 **Automation:** Conditional (only if a description-less metric exists on the target build)

Preconditions: logged in; a metric known to LACK mapped description data is identified live

#	Step	Expected
1	Select a metric whose description data is missing	Metric selected
2	Observe the description affordance	UI shows an explicit 'description unavailable for this metric' message (not empty, not error toast)

Final expected: unavailable_message_visible: true

Impact / Affected: Missing description data must show an 'unavailable' message, never a silent blank.

TC-DESC-TRIGGER — Disambiguate the description trigger (select vs hover) and confirm it is discoverable

Category: (all new) **Risk:** smoke **Priority:** P1 **Traces to:** A3, A4 **Automation:** Yes (drives the locator strategy for all other cases)

Preconditions: logged in; description data seeded

#	Step	Expected
1	Open the Metric dropdown for an APM metric; hover over the metric option	Record whether hover surfaces the description (ticket TC steps say hover)
2	Select the metric	Record whether selection surfaces the description (AC A4 says on-select)

Final expected: description reachable by at least one documented gesture; the working gesture is recorded for automation
